

satisfactory, but a larger sample size may generate more significant, valid, and reliable results. In the future, it is suggested that this game be improved by adding more features like the actual Monopoly game to provide players with more enjoyment. Further study might consider other variables or models such as the enjoyment model or engagement model to be adapted to compare the results in designing a more effective educational game that exposes the public to the vaccines.

ACKNOWLEDGMENT

The researchers thank UiTM Cawangan Melaka for sponsoring this research under the TEJA Internal Grant numbered GDT2021/2-10. We also would like to express our gratitude and appreciation to all individuals directly or indirectly involved in this study.
